A bizarre idea

Everyone in Geotopia has the ~~first~~ same first name... Bob, say, or Jane

Gaia — ~~Bw~~ or Dweezle — or Moon

- But if you get to know a person you learn their 2nd name, and begin to use it when the relationship has developed sufficiently.
- You must get permission to call a person by his/her 2nd name

Should Heron change his name to Bob Smith?

Quitting Smoking as a metaphor for life...

It's easy to not smoke IF you realize that you really don't want to smoke

I really didn't want the expense, the toxic effects on health, the slavish addiction, etc. anymore. Any attraction I have to it is purely silly BS, old routines held in place by mammalian conditioning.

The main "thing" to understand is that "understanding" isn't enough. It is one important dimension of activity; so is music, dancing, sports, relationships, ~~philosophy~~ ritual ~~worsh~~ adoration

understand is an important ~~aspect~~ ~~but~~ if somewhat small aspect of the situation

RITUAL ADORATION

Q: Why should I engage in ritual adoration?

A: You probably shouldn't, if you don't feel a desire to adore. If you don't have that feeling, adoration is a sham.

I've developed a new approach to ~~teaching~~ learning esl. the accompanying essay gives a greatly simplified overview of gendo.

In July 1995, the school at which I ~~taught~~ closed because of financial shenanigans by the owner. The ESL program was thriving ~~and growing~~ at the time. a growing number of highly motivated students. My attendance statistics were consistently the highest at the school. because my system works.

An ~~ooe~~
A Way Too Simple Overview of ~~the~~ a
rationale ~~for~~ theory for the success of Gendo.

History of Education.
Theory of Education come and go what works works. Learning a

10,568

acquiring fluency in a second language by an adult is not primarily a rationale process.

The process is more akin to learning to play improvisatory jazz piano that it is like learning accounting or chemistry. There is a rational component (and it must be addressed rationally (best by interactive CD ROM)) but is secondary — laid upon a bedrock of neuromuscular patterns

It takes an infant at least eight years to master English Most of it irrational. The Mind develops after language is in place.

the mind is a ~~[illegible]~~ emergent property of language.

No language – no mind.

Languaged consists of patterned behavior (neuro muscular events) Any muscle-system will do and the particular embodiment will greatly affect the nature of the emergent mind. ie. A.S.L.

Speaking English involved the patterned use of the 68 muscles of the "vocal apparatus" – "the language machine".

Like a ~~[illegible]~~ potential jazz performer there is no substitute for actually playing the piano. No amount of learning about piano will result in his ability to play unless he plays.

10,570

the current ~~scandal of~~
controversy surrounding the
so-called "whole language"
approach and so-called "phonics"
is a good example.

If you're not interested in the
technical rational for Bendo,
skip directly to part 2.

It takes an infant 8 years to master the
basics of English.
An adult could do it in 4

are you ready for Bendo,
are you ready to give up your little
word games. explanations theories, etc.
are you ready to give up all belief systems
(BS)

10,571

What's clear is that what most teachers are doing in most esl classroom simply doesn't work. Despite all the great theories and rationales for why they should a must work (most esl students quit in frustration - having progressed very little in the English fluency. ~~Thus~~

There are, of course, exceptions. The the occasional successes are accomplished more despite the training than as a result of the training.

"Listen, you don't get it. I'm not criticizing Bob. I'm criticizing your puny ideas of Bob.

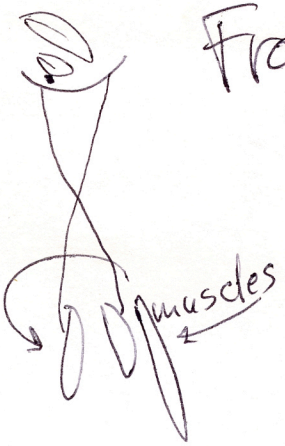

Gendo.
At bottom, humanity suffers from an error in it's concept of exactly who/what and individual is.

Scientists have finally realized the the human body is a single field - that the N.S. is distributed throughout the entire body

10,619

Now, we must realize that the body is integrated/a part of the entire cosmos.
There are no "seperate" things.
"things" exist only in the L.M.

Subtle and pervasive epistemological assumption imposed on our evaluation simply because English/American is running in our ~~boots~~ L.Ms

10,620

Gendo.

Until we come to grips with how puny our understanding/knowledge is. we can't really begin the process of learning.

ESL

a series of ~~graded~~ increasingly long and ~~easy~~ more complex speaking etudes designed to train the ~~student~~ learner's neuro-muscular speaking apparatus.

intellegently structured speaking etudes

sequences of neuromuscular firing patterns.

~~At present, teach~~

teachers must be trained to use the Lindo Method. ~~Past experience~~ teachers required between 5 and 8 hours of classroom instruction ~~to pass the~~ and and equal amount of home practice to pass the teacher certification test.

10,622

If there is a drawback to the system, it's that the teacher must be able to hear accurately and transcribe phonetically.

Anyone with normal hearing can do this with a few hours practice

---

ESL learners don't hear the same thing that native speakers hear.

In order to master a new sound system, it is essential to have an accurate symbol system to "peg" the new auditory categories.

10,623

The American/English ~~spelling~~ writing system is a ~~fake~~ mess

I have found only 402 words out of 100,000 that are spelled exactly as they are pronounced.

FONOGRAFIKS is a compromise. In developing an ~~accurate~~ system ~~for representing sounds~~ that is useful as a pedagogical tool, I was walking a line between accuracy and simplicity.

I believe Fonographics is a breakthrough for learners.

The symbols of IPA are too difficult to draw and don't have any aesthetic unity. Utterances transcribed into IPA look weird and scary to mere mortals.

10,624

Fono. ~~Look~~ like is composed mainly of normal American/English capital letters. Only seven new symbols are employed.

Fono employs only 29 basic sounds — a radical reduction in the usual number of 40-44

Analyzing speech ~~with~~ the as vowels and consonants is totally inappropriate.

Fono divides the sounds of A/E into 3 groups.

excerpts from a much longer (but still inadequate) articulation of a radical departure from current methodology and theoretical justification

---

Acquiring 5th fluency in a new language as a "post-child" adult is not primarily a rational process - it's pre-rational. Language is the structure upon which rationality is built. Merely "knowing about" a language in no way

10,626

prefigures SHH fluency.

The primary fact of language is patterned activity in the neuro-muscular LM

This is how children learn to SpHH

The actual fact of methods of acquiring mastery of piano has changed little (if at all)

A mere intellectual understanding of piano is insufficient to actually play music.

There is no substitute for physical mastery of the neuromuscular activities that constitute American/English.

This kind of "knowing" is pre-rational.

Gendo is not a complete ESL program (yet). ⊛

It deals exclusively with the SHH skills.

⊛ I'm looking to collaborate with for collaborators on a project to create a parallel W+R CD course.

Computer techology has developed to the point where I can create and publish my own materials.

There is a lot of theoretical, cognitive science sort of stuff underpining Gendo and someday I'll write it up. for now a ~~Fit that~~ Bibliography will have to do.

Note: this biblio includes All the books that have contributed to my development as a thinker - in ESL language, etc. You might notice that there are precisely zero references to books specifically on ESL.

Overcoming my perfectionistic tendencies nature to write this all too inadequate abstract.

Someone else may change your mind.

Actually, the very idea, "your mind" or "my mind" is a fiction — a mere way of talking about/thinking about our experience

You don't need to "have a position".

Relax. There is absolutely nothing that (your idea about "who you are") can do about anything.

If you're not going to "take personally" when people dislike me, Then ~~it~~ must examine what it means to not "take personally" when people love me.

10,803

Taking it personally and not taking it personally are merely two of many possible ways of talking about "it" ... thinking about it. Explaining it.
It's ridiculous to concern yourself with a question like, "Which is the truth?"

You don't really have to do away with ALL beliefs - immediately

You just <u>once</u> have to REALLY see how stupid it is to <u>believe</u> something... to see what a limiting commitment it is.

Seek refuge in silence, not dogma.

The Gendo CD Rom

There's nothing wrong with having "beliefs"... as long as you really know how stupid that is.

Sexual maturity doesn't come (if you'll pardon the pun) with the first ejaculation

It takes years of experience to achieve mastery in the domain — sensitive + aware

It doesn't happen in an instant.

Same with EM

The first satori is an eye-opener.

EM emerges over several years ~~or meany just months~~.

After the first ejac... you become a sexual being.

After first satori — you become (in old terminology) a spiritual being.

How do I "be" with others.

- our normal way of writing masks the structure of thought
- glancing at a long paragraph does not immediately tell you if it is composed of a couple of very long, complex ideas

Phonographics
a new method to teaching writing/reading

Phonographics is a radical departure from traditional methods of teaching.

Phonographics is a strict phonics approach employing a training alphabet of 29 characters.
22 letter from the regular
plus 7 new symbols

Children are implacably logical
(foot - foots; make - maked; etc)
MEYK - MEYKT

The reason reading has been difficult to teach is simple —
the alphabet is stupid.
Although we tell our children that the alphabet is phonetic - it isn't
less than 500 words out of 20,000
in ATD are spelled EXACTLY
like they're pronounced.

the letter a has at least 7 different sounds attached to it

crazy 2-letter combos

this is all overwhelming to an eminently logical child.

Thus the need for a training "alphabet" - Phonographics

a system employing 29 symbols — 22 of the letter from the alphabet plus seven new symbols

---

The methodoly is more game oriented in the beginning — funny noises, etc.

Many adults choke on the radically new idea of a training system. a beginners alphabet.

But Japanese children learn three different writing systems with no more difficulty than American learn one.

Abstract

Phonographics
FON=GRAF=
fon=graf=Ks

fonographics is a ~~metho~~ simple to teach yet easy to learn systematic method ~~designed~~ to teach ~~reading~~ writing/reading to humans of any age

Teaching Phonographics requires a well-trained teacher. Fortunately the skills needed are easily learned and

10,997

most teachers can learn the skills in under 10 hours of training

3 2-hr session plus homework/practices are sufficient

Phonographics - the matrix

Phonographics is a specially designed training alphabet

It consists of 29 "letters"

22 letters from the "adult" alphabet plus 7 new characters

People are logical by nature - especially ~~kids~~ children

Most human mistakes/trajedys result from someone assuming something perfectly logical...

. I majored in DENNIS HORN.

. Then I graduated

? Now, what does Heron want to do

10,998

The Claim

A naive, competent 7-year-old could acquire the basic reading/writing skills in 20 hrs.

Children should learn to draw - before they learn to write.

→ The rest is development, homework, introduction to the "adult" alphabet as soon as they're ready - This could very widely among individuals - from 6 months to never.

The stupid adult alphabet

The stupid old adult alphabet is — let's face it — stupid and old. Now, it's true, the development of a "phonetic" writing system

10,999

~~the~~ is one of the great human achievements
along side of fire, agriculture, etc

- the system we have inherited is phonetic more in theory than in ~~actually actuality~~ fact.
- less than 500 word out of 70,000 are spelled ~~ex~~EXACTLY how ~~th~~ they are pronounced

---

gendo reasoned thought

reasoned thought begins in silence
most adults are brain-dead

The alphabet, as it actually functions
is a mess.
The fact that ~~some~~ so many
master it with such minimal
instruction is a tribute to
protoplasm.

11,000

- once a student "gets" the connection between sound and symbol
- of course - some students may resent having to learn such a stupid thing as the alphabet.
- some students may have difficulty learning the SOA
- However its better for them to dislike a stupid writing system than to hate themselves.

Although learning alphabet is still difficult (why? - because it's stupid) at least it's now within a context of solid symbol/sound relationships
